

**Press Release - February 21, 2013**  
**Itogon Gold and Silver Project Work Program Update**

Patric Barry, President Tiger International Resources (TGR.V) reports:

The company completed documentation for the renewal of the Itogon Gold and Silver Project in a timely fashion and submitted all documents to the Philippine Mines and Geosciences Bureau before the two year renewal date. Confirmation has been received that MGB staff are working on the renewal application documentation and the company is confident of the license being renewed.

The 43-101 Report was amended at the instruction of the British Columbia Securities Commission and the latest report, dated December 1<sup>st</sup> 2012, was submitted to the Commission on Dec 10<sup>th</sup>, 2012. Tiger contacted Commission staff two weeks ago and was told that review was pending, slowed by their work backlog. Since the Company may not quote details that are included in the 43-101 report until it has been accepted by the Commission staff we await its acceptance and will publish it upon acceptance.

Tiger International recently participated in a surface sampling program and the 20 samples that were sent to McPhar Laboratories in Manila are reported to be anomalous but no assay results or professional reports have yet been received.

We note the decline in the TSX Venture Index, and assume that the decline in the company's share price is a function of the decline of the overall market, as indicated by the TSX.V index plunging to recent record lows. Patric Barry comments: "The fundamentals of the Itogon Project are strong, and the company is poised to move ahead upon acceptance of the 43-101 report. While the decline in the company's share price is disappointing, there is no fundamental reason for then price decline known to the Company other than the overall market conditions, demonstrated by the decline in the TSX.V Index."
