Press Release – Honey Gold Norman Copper Claims September 21, 2005

Patric Barry, President of Tiger International Resources (TGR.V) reports that gold assays have been received from the joint venture partner in the project from random samples that were taken from the Honey Gold claims in April 2005.

The assays were performed by Davao Mineral Laboratories in Davao City, in the Philippines, and the assay report is dated April 30, 2005. The assays were of five samples, randomly acquired in diggings that had been opened by artisan miners who had worked recovering gold on the property. The assays noted are:

Honey Claim #1	1.87 au gms per tonne
Honey Claim #2	5.27 au gms per tonne
Honey Claim #3	6.87 au gms per tonne
Honey Claim #4	3.47 au gms per tonne
Honey Claim #5	8.60 au gms per tonne

Tiger has retained Senior Geologist, Mr. Ian S. Cooper of Cooper Geological Services Pty Ltd of Brisbane, Australia, to conduct the work program on these claims, and being a “qualified person” as defined by Canadian National Policy 43-101. Mr. Cooper will verify these assay results and use them as a guide for further work. Tiger and Mr. Cooper are planning a work program on these claims in November, 2005, and the program will focus for gold on one side of the claims and copper on the other. Tiger’s optimism is buoyed since producing copper mines presently operate on both sides of the claims, and Ian Cooper has previously visited an adjoining property, and has reflected an opinion that the belt of mineralization that contains the copper and gold in the area passes through the Honey Gold Norman Copper claims. The November work program will provide data that proves or disproves this probability.

The Honey Gold Norman Copper claim totals 2,385 sq. hectares and is located in Surigao del Norte in the southern Philippines in a known gold and copper producing area. The Surigao Gold and Gold/Copper Province is in the northern part of the prolific Eastern Mindanao gold belt, where there is an increasing exploration focus on the Belt that extends for some 400kms from Mati in the south to Surigao in the north, primarily because much of this area has been unexplored for some 20 years. In the Surrago area activities have intensified following the discovery of the Boyongan gold/copper porphyry deposit. This deposit, originally discovered in 2000 (Philex), is subject to intensive delineation drilling by Anglo American. Also active in the Suriago area are Australian company Red5 at the Siana Gold deposit, Canadian company Panoro Minerals Ltd and Manila Mining's gold operation at their Placer Gold Mine, while further south Canadian company SurAmerican Gold Corp is active at its Comval gold project.

Tiger has entered a joint venture with the Ranario family and has executed a binding formal agreement that provides for a joint venture whereby Tiger owns 90% interest in the claims and production and manages the work program and provides 100% of expenditure.

Questions about this press release may be directed to Patric Barry at (949) 362.1600 or email to 26981@sbcglobal.net. Tiger is a TSX Listed company with 6,852,764 shares on issue. Tiger presently has gold, copper and nickel/cobalt operations in the Philippines and Malaysia.
